

## List of Figures, Tables and Boxes

### Figures

|      |  |     |
|------|--|-----|
| 1.1  | Policy dimensions and main types of urban farming  | 11  |
| 2.1  | Characteristics of a Multi-Stakeholder Process (MSP)   | 23  |
| 2.2  | Phases of an MSP   | 24  |
| 4.1  | Various types of urban agriculture   | 89  |
| 4.2  | Location of case studies   | 92  |
| 4.3  | Financial flows and financial products for urban farmers in St Petersburg, Russia                    | 94  |
| 4.4  | Financing of urban agriculture in Botswana   | 96  |
| 4.5  | Financial intermediaries in the urban agriculture financial cycle                                    | 97  |
| 4.6  | Financial flow for urban agriculture, Texcoco, Mexico  | 98  |
| 4.7  | Financing of urban agriculture with participatory budgeting, Rosario, Argentina                      | 98  |
| 4.8  | Financing of urban agriculture in Nepal  | 100 |
| 4.9  | The case of PROVE Pantanal, Mato Grosso do Sul State, Brazil   | 101 |
| 4.10 | Financial sources according to the type of urban agriculture   | 102 |
| 4.11 | The necessity to adapt and optimise the resources according to the type of urban agriculture desired | 103 |
| 4.12 | Urban agriculture production cycle and sources of financing  | 103 |
| 4.13 | Mixed municipal fund for urban agriculture   | 105 |
| 4.14 | Evolutionary loans with decreasing level of subsidy, the Casa Melhor model, Brazil                   | 106 |
| 6.1  | The Sustainable Development Continuum for organic micro farming projects                             | 162 |
| 7.1  | Impact of distance from Hanoi on agricultural added value per hectare                                | 181 |
| 7.2  | Marketing chains for urban and rural agriculture   | 186 |
| 7.3  | Agricultural output value and its contribution to GDP  | 197 |
| 8.1  | Solid waste characteristics in selected cities   | 211 |
| 8.2  | Composting scales of intervention  | 214 |
| 8.3  | The Nutrient Recycling Loop  | 217 |
| 8.4  | Institutional platform for recycling of organic waste in Kumasi, Ghana                               | 221 |
| 8.5  | Questions to be addressed for an appropriate establishment of municipal compost stations             | 227 |
| 9.1  | Growth in urban water supply coverage by world region  | 244 |
| 9.2  | Basic types of wastewater use  | 248 |
| 9.3  | Risks and benefits of wastewater use   | 256 |
| 10.1 | Sustainable Urban Livelihood Framework   | 279 |
| 12.1 | System structure and aspects of control in different urban livestock systems                         | 353 |
| 12.2 | Movement of sheep from the countryside to Dakar (Senegal)  | 357 |
| 13.1 | Settlement ponds in Lima   | 406 |

### Tables

|     |   |     |
|-----|---|-----|
| 3.1 | Integration of urban agriculture through various planning tools   | 70  |
| 7.1 | Summary of typology of socio-economic profiles  | 176 |
| 7.2 | Monthly net income from irrigated mixed vegetable farming in West and East Africa (US\$ per actual farm size) | 181 |
| 7.3 | Origin of different food items sold/consumed in Kumasi, Ghana   | 184 |
| 7.4 | Percentage given to urban production in urban supply  | 185 |

|      |   |     |
|------|---|-----|
| 7.5  | Comparative multi-functionality of three urban sectors                        | 188 |
| 7.6  | Summary of indicators of UA social and economic impact                        | 191 |
| 7.7  | City growth and agricultural transformation in Beijing                        | 198 |
| 7.8  | Income ratio of enterprises in peri-urban Beijing by sector                   | 199 |
| 7.9  | Economic performance of urban agricultural industry                           | 199 |
| 7.10 | Farmer households involved in UA in peri-urban Beijing                        | 200 |
| 7.11 | Revenue generated in different farming systems per ha                         | 207 |
| 8.1  | Some compost facilities compared in West Africa (Dreschsel et., 2004)         | 228 |
| 8.2  | Advantages and disadvantages of container composting                          | 234 |
| 9.1  | Estimated volumes of wastewater in Asia                                       | 247 |
| 10.1 | Management issues in container gardening                                      | 286 |
| 10.2 | Comparison of urban FFS session structure with the classical structure        | 300 |
| 11.1 | Horticultural plants cultivated in urban areas                                | 317 |
| 11.2 | Monthly per capita consumption of vegetables in Bangladesh                    | 319 |
| 11.3 | Most frequently consumed vegetables per socio-economic group in Brazzaville   | 319 |
| 11.4 | Water consumption of some horticultural crops                                 | 326 |
| 12.1 | Annual per capita consumption of livestock products in Beijing                | 352 |
| 12.2 | Categorisations of urban livestock systems                                    | 354 |
| 12.3 | Issues of scale and energy use  | 355 |
| 12.4 | Forms, functions, interrelationships and problems in dairy production systems | 356 |
| 12.5 | Potentially positive and/or negative aspects of animal keeping                | 357 |
| 12.6 | Areas for further work on a rather short-term and local scale                 | 360 |
| 12.7 | Comments on grazing animals   | 372 |
| 12.8 | Main diseases that humans can catch from pig farming                          | 376 |
| 13.1 | Characteristics of urban aquaculture systems managed at different intensities | 384 |
| 13.2 | Land use in the East Kolkata Wetlands   | 408 |
| 14.1 | The urban-rural tree-forest matrix  | 418 |
| 14.2 | Agroforestry practices in the periurban cities (Nigeria)                      | 435 |

## Boxes

|      |  |    |
|------|--|----|
| 1.1  | Urban farming systems  | 3  |
| 1.2  | Quito Declaration  | 5  |
| 1.3  | Urban agriculture and the Millennium Development Goals   | 7  |
| 1.4  | Multi-stakeholder Policy making and Action planning on urban agriculture                               | 12 |
| 1.5  | Facilitating Access to Land for urban agriculture  | 14 |
| 1.6  | Localised food systems   | 15 |
| 2.1  | Analysis of experiences with MSPs on urban agriculture   | 25 |
| 2.2  | Inter-actor agreement for development of a base-line study and action plan on urban agriculture        | 27 |
| 2.3  | Identification and mapping of urban agriculture and vacant land areas                                  | 28 |
| 2.4  | Exploratory study in Accra, Ghana  | 29 |
| 2.5  | Key questions to identify stakeholders   | 29 |
| 2.6  | Elaboration of an urban agriculture action plan in Governador Valadares, Brazil                        | 33 |
| 2.7  | Revision of ordinances on urban agriculture in Kampala, Uganda   | 35 |
| 2.8  | Inclusion of urban agriculture into the city's Development Plan in Villa María del Triunfo- Lima, Peru | 36 |
| 2.9  | Urban farmer Duijndam in the Bieslandse Boven Polder   | 42 |
| 2.10 | Community gardens in Vancouver   | 47 |
| 2.11 | Vancouver Food Policy Council  | 49 |

|      |   |     |
|------|---|-----|
| 3.1  | Land use planning in Zambia   | 54  |
| 3.2  | Urban agriculture in the future   | 55  |
| 3.3  | The case for larger residential plots – Maseru  | 58  |
| 3.4  | Integration of urban agriculture into urban planning- the case of Dar es Salaam                     | 62  |
| 3.5  | HIV/AIDS and urban agriculture in Botswana  | 63  |
| 3.6  | Accessing land for UA in Kampala  | 64  |
| 3.7  | Legislative framework for urban agriculture in Zimbabwe   | 66  |
| 3.8  | Harare Declaration on urban and peri-urban agriculture  | 68  |
| 3.9  | Building food-secure neighbourhoods, the role of allotment gardens                                  | 69  |
| 3.10 | Typical urban producer in Abidjan   | 76  |
| 4.1  | City survey of experiences related to credit and investment for urban agriculture                   | 91  |
| 4.2  | Panel event on credit and investment for urban agriculture  | 110 |
| 5.1  | Gender research   | 134 |
| 6.1  | Community Supported Agriculture   | 148 |
| 6.2  | Past examples of community-based urban agriculture  | 149 |
| 6.3  | Supporting HIV-AIDS communities through CBUA  | 152 |
| 6.4  | Prison communities and CBUA   | 152 |
| 6.5  | Development Continuum   | 162 |
| 6.6  | Permaculture  | 168 |
| 8.1  | Common forms of organic waste   | 211 |
| 8.2  | Solid waste and urban and peri-urban agriculture in Bamako, Mali                                    | 215 |
| 8.3  | Factors affecting biological decomposition  | 219 |
| 9.1  | Selected chemicals of potential health concern identified in untreated municipal wastewater         | 251 |
| 9.2  | Ecological sanitation   | 253 |
| 10.1 | Main stages of PTD  | 283 |
| 10.2 | Choice of crops in container gardening  | 285 |
| 10.3 | Basic elements of adult learning  | 289 |
| 10.4 | Modules of the FFS  | 300 |
| 11.1 | Major recommendations to reduce risks   | 324 |
| 11.2 | Cost estimation of a simplified hydroponics system  | 330 |
| 11.3 | Allotment gardens in Cagayan de Oro, Philippines  | 333 |
| 12.1 | Historical differences between continents   | 351 |
| 12.2 | Relevance of urban livestock  | 352 |
| 12.3 | Urban livestock in the USA  | 359 |
| 12.4 | Legislation for urban livestock keeping in Burkina Faso   | 363 |
| 12.5 | Historical developments and visions of urban conditions   | 364 |
| 12.6 | Supporting Endogenous Livestock Development   | 365 |
| 13.1 | Aquaculture defined   | 383 |
| 13.2 | Integrated aquaculture and avian flu  | 393 |
| 14.1 | Economics of urban forestry   | 417 |
| 14.2 | Main principles of the concept urban forestry   | 418 |
| 14.3 | Role of trees outside forest (TOF) in urban environment   | 419 |
| 14.4 | Forestry outlook study & urban and peri-urban forestry – The case of West and Central Asia (FOWECA) | 420 |
| 14.5 | Urban forestry in the Canadian National Forest Strategy (2003-2008)                                 | 421 |
| 14.6 | Urban forestry in the city of Curitiba  | 422 |
| 14.7 | Malaysia-Denmark twinning for urban forestry  | 424 |
| 14.8 | What is the Johannesburg City Parks Agency and how does it work?                                    | 426 |
